GRADUATION PROJECT · LEADERSHIP PROJECT MODALITY

# Optimizing the Use of Google My Business to Increase Sales at Hamburguesas El Corral, Grupo Nutresa

---

Project Code: M37

Area: Marketing

# Agenda

1 Diagnosis & Situation Analysis

---

2 Problem Statement

---

3 Justification

---

4 Objectives

5 Theoretical Framework

---

6 Methodology & Timeline

---

7 Activities & Results

---

8 Conclusions & Recommendations

# 1. Diagnosis & Situation Analysis — Company Snapshot

**Hamburguesas El Corral** — legally Industria de Restaurantes Casuales S.A.S. (IRCC S.A.S.) — was founded in 1983 next to the Pontificia Universidad Javeriana in Bogotá. It belongs to Alimentos al Consumidor (ACO), one of Grupo Nutresa's eight business units, formed in 2015 after Nutresa acquired 100% of Aldage Inc., the Panamanian owner of Grupo El Corral.

**7,797**

ACO employees  
group-wide (3,000 at El Corral)

**7.6%**

of Grupo Nutresa's  
total sales come from ACO

**41.22%**

El Corral's share  
of ACO's total sales

## MARKETING TEAM STRUCTURE

*A vertical, functional structure organized by task ownership:*

Marketing Manager

Marketing Director

Marketing Analyst

Design Analyst

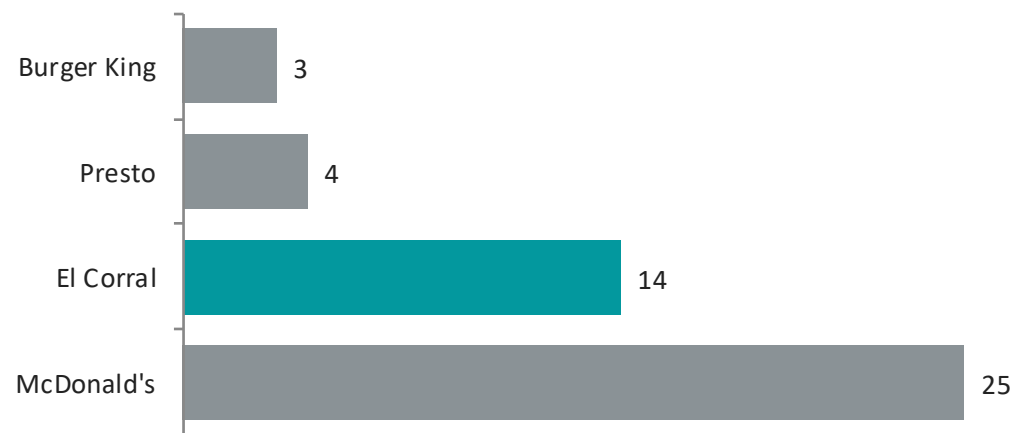

Digital Media Specialist

Channel Experience  
Coordinator

Marketing Intern

# 1. Diagnosis & Situation Analysis — Market Position

## TOP-OF-MIND RECALL — FAST FOOD CATEGORY

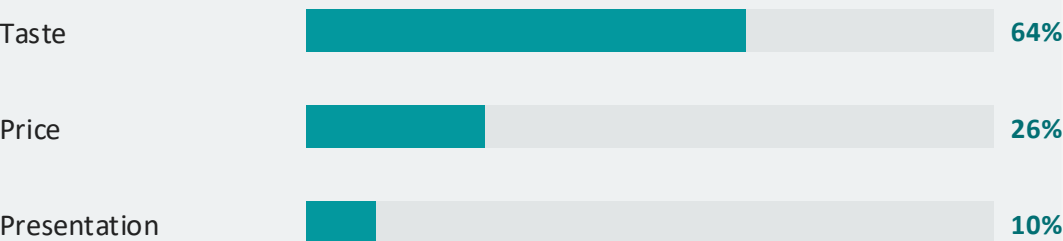

*El Corral ranks 2nd in national recall (14 pts) — clearly ahead of Burger King and Presto.*

**COP 494,276M** in 2022 total sales — category leader in the Hamburger segment (41.22% share).

## CONSUMER QUALITY PERCEPTION SURVEY

**76%** of respondents believe overall product quality has declined over the last 10 years.

*Quality concerns compound the digital-visibility gap — addressed further in Recommendations.*

# 1. Diagnosis & Situation Analysis — Porter's Five Forces

## INDUSTRY ATTRACTIVENESS ASSESSMENT

**LOW**

### **Threat of New Entrants**

High capital requirements, strong brand/supplier loyalty, and years of consumer experience form real entry barriers.

**HIGH**

### **Threat of Substitutes**

300+ burger concepts in Colombia (2021); fast casual and gourmet challengers like Home Burgers are growing quickly.

**HIGH**

### **Supplier Power**

Heavy dependence on specific raw-material suppliers; switching costs are high and quality-sensitive.

**HIGH**

### **Buyer Power**

E-commerce makes price/quality comparison effortless, shifting negotiating leverage toward consumers.

**HIGH**

### **Competitive Rivalry**

McDonald's, Presto, Burger King, Home Burgers and Sierra Nevada compete intensely on price and share.

## 2. Problem Statement

- 1 The restaurant market is migrating from traditional to digital channels.
- 2 Consumers are increasingly informed before they buy.
- 3 Perceived experience now strongly shapes purchase intent.

*El Corral must find digital tools that enable an effective transition — not only preserving its current customer base, but growing the number of people it reaches.*

### RESEARCH QUESTION

**How can Hamburguesas El Corral, of Grupo Nutresa, drive a 12% increase in sales using Google My Business for the first half of 2023?**

### 3. Justification

El Corral holds **56% national brand recognition** and closed last year as the sales leader in the hamburger category. Yet digital competition keeps intensifying — rivals win visibility through social platforms and campaigns such as Burger Master, while an optimal online presence is no longer optional for any brand that wants to be found.

#### THE APPROACH

Combining Google My Business with SEO fundamentals and Inbound Marketing techniques — used successfully by brands like LinkedIn and Whole Foods — gives El Corral a low-cost, high-leverage path to more search visibility and more qualified traffic.

**+2.6%**

potential increase in units sold with a well-executed strategy

**+3.26%**

potential increase in sales volume with a well-executed strategy

*This project also aims to close a literature gap: little academic research addresses GMB optimization for the Latin American market.*

# 4. Objectives

General Objective

**Implement an Inbound Marketing strategy for Hamburguesas El Corral, based on Google My Business, to increase sales by 12% for Q2 2023.**

01

## DESIGN

By early 2023, design a digital strategy to attract, retain, and delight consumers — supporting the sales-growth goal through Inbound Marketing.

02

## DEFINE

Define GMB usage parameters and build a roadmap for the marketing team to apply search engine optimization (SEO) in the first two months of 2023.

03

## IMPLEMENT

Implement the Inbound Marketing strategy between March and June 2023, monitoring GMB statistics and adjusting to ensure results.

# 5. Theoretical Framework — Core Concepts

1

## Inbound Marketing

How a brand becomes attractive to consumers by delivering value-driven content, so prospects come to it rather than being interrupted by outbound ads (Ehrens, 2014; Halligan & Shah, 2014).

2

## SEO

Search Engine Optimization: adapting a site's content, design and technical setup to rank higher in search results and increase qualified traffic (Erdmann et al., 2022).

3

## Google My Business

A Google functionality, aimed at businesses, that lets owners manage and update their online presence — hours, location, photos, and services (Hollinsworth, 2022).

*Inbound Marketing has a multichannel focus (web, blog, social) built around value-adding content; SEO and Search Engine Marketing (SEM) are two of its core techniques — GMB is the tool this project uses to apply both (Bleoju et al., 2016).*

# 5. Theoretical Framework — Digital Landscape & Funnel

## WHY SEARCH MATTERS

**3.8M**

Google searches happen every minute, worldwide (Skai, 2019)

**69.1%**

Internet penetration in Colombia, up 2.2 pts YoY (Kepios, 2022)

**44% vs 8%**

of users check the Local Pack vs. “More places” when searching (Meraz, in Natorina 2020)

## NAGPAL & PETERSEN (2020) — SALES FUNNEL MODEL

*Consumer search behavior shifts predictably as buyers move through the funnel:*

### Awareness

Informational search

*“What should I eat tonight?”*

### Consideration

Transactional search

*“Best burger place near me”*

### Purchase

Navigational search

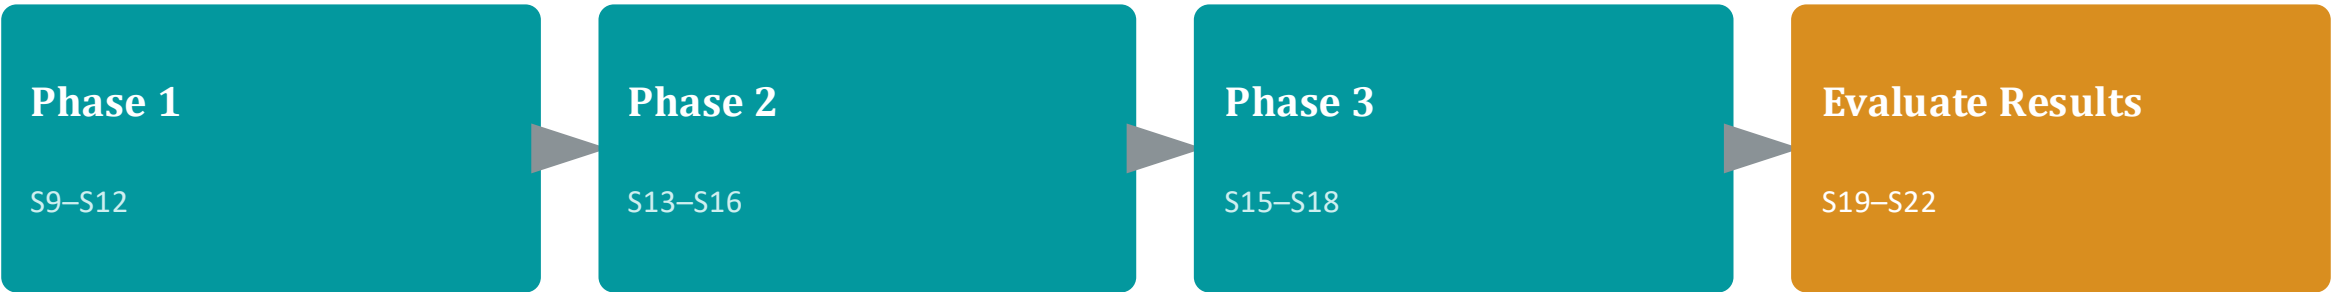

*“El Corral menu / hours”*

# 6. Methodology & Timeline

**Mixed-methods, exploratory sequential design** (Creswell, 2009): qualitative insight from academic databases is deepened with quantitative data from consumer surveys and market studies.

|                   |                                                                                        |
|-------------------|----------------------------------------------------------------------------------------|
| Company           | IRCC SAS — Hamburguesas El Corral                                                      |
| Practice Area     | Marketing                                                                              |
| General Objective | Implement an Inbound Marketing strategy based on GMB to increase sales 12% for Q2 2023 |

## EXECUTION TIMELINE — WEEKS 9 THROUGH 22

*The final roadmap consolidates monitoring findings from each phase into step-by-step guidance for the marketing team, plus improvement recommendations to avoid repeating known-ineffective tactics.*

# 7. Activities & Results — Strategy Execution

## OBJECTIVE 1 — ATTRACT, RETAIN, DELIGHT

### Attract

Publish value-driven content and personalized experiences; track effectiveness via IG/Facebook shares vs. reach.

### Retain

Apply SEO under the Nagpal & Petersen model, matching keyword strategy to how prospects actually search.

### Delight

Monitor perception via interviews and focus groups; respond fast and tailor content to the defined buyer persona.

## OBJECTIVE 2 — GMB PARAMETERS & SEO ROADMAP

**Literature search parameters:** “USE” AND/OR “MANAGEMENT” AND “GOOGLE MY BUSINESS” AND “SEO” AND “ATTRACTION”

*Findings are applied through the four factors that drive organic clicks:*

Search Ranking

Brand Characteristics

User Search Behavior

Controllable / Demographic Variables

*Practices are first rolled out in pilot locations to validate impact before a full-network rollout.*

# 7. Activities & Results — Projected Impact

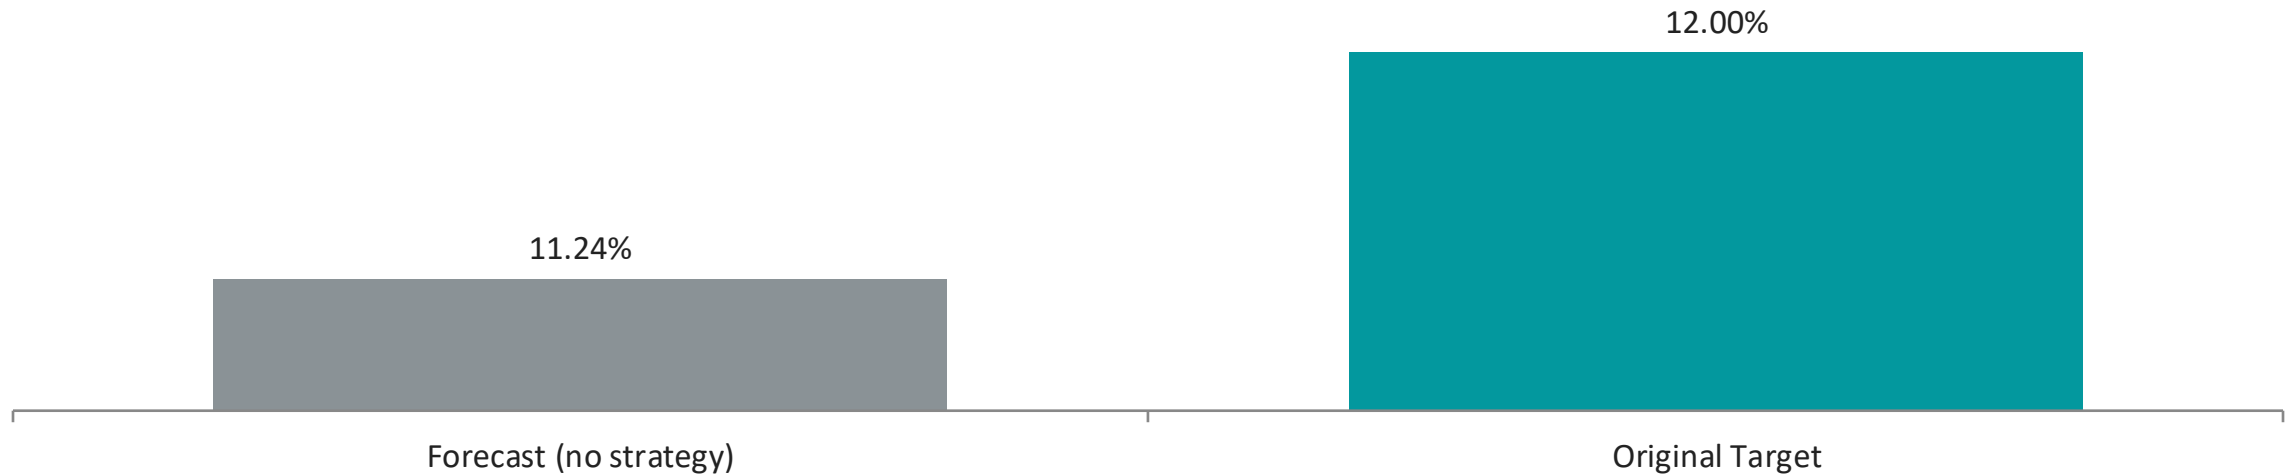

## A COMPLETE GMB PROFILE IS EXPECTED TO GENERATE

**+38%** probability of more visits

**+29%** probability of more purchases

Source: joint working session between El Corral's marketing team and Google (Aug. 2022), applied to the observed Q2 2021 → Q2 2022 growth trend (Ipsos, 2014). Units-sold growth is projected to reach 9.45% with the strategy vs. 6.85% without it.

## Q2 2023 SALES GROWTH — FORECAST VS. TARGET

# 8. Conclusions

## HEADLINE RESULT

# 14.5%

total sales growth achieved between the compared quarters — 2.5 points above the original 12% target.

1

Validates the mixed-method approach and the choice of GMB + SEO + Inbound Marketing as the right strategic combination.

2

Confirms a clear surge in consumer use of digital tools — without it, gains this size would not appear.

3

Establishes a neutral-environment benchmark to replicate the analysis for future quarters (e.g., Q3 2023 vs. Q3 2022).

# 8. Recommendations

## 1 Follow the Sequence

Run the Objective 2 literature search strictly in weeks 3–4 of the schedule, so findings stay aligned with the attraction strategy defined earlier.

## 2 Pilot Before Scaling

Test new practices in select locations first, using GMB's Insights report (search volume, user preferences) to confirm impact before a full rollout.

## 3 Extend to Social Media

Apply the SEO/keyword findings from this GMB research to El Corral's contest- and trend-driven social content to widen reach and attraction.

## 4 Pair With a Quality Plan

The survey shows the challenge isn't purely digital — accompany this strategy with an action plan to address taste, presentation, and price perceptions.
